PERSONAL PROJECTS

Frontend Development

- Created my own website from scratch.
- Designed and coded 10+ websites for practice and some for free for my friends. Examples - **portfolios, landing pages, NFT showcase, online store, custom-designed forms, etc.**

Biosfier - Women's ethnic wear

- Built an **e-commerce website** through Wix to take my uncle's business online.
- Later, built the website through **WordPress** from scratch and got it working again.

Java Projects

- Created many applications through Java OOP like **proofreader, email id generator, employee salary database, calculator, calendar, text encryption & decryption, bank wallet app** and much more.
- All applications were built completely by me and did not have any GUI.

Python Projects

- Made a virtual assistant for PC using Python libraries.
- Created a virus that automatically executes without letting the user know and mails me all the credentials of every wlan network the user has connected to.
- Various practice projects like cracking algorithms and working with binary trees.
